## PRODUCT OVERVIEW

# ODDS®

(Over-Speed Directional & Detection System)

### *Increases your facility's security.*

The O.D.D.S.® package provides an advanced alert for potential vehicle threats to increase response/reaction time to employ the barrier adding safety and reducing risks.

### *Alerts the Guard Force at an ACP that a vehicle is approaching at a high rate of speed in the inbound or outbound lanes.*

Reduce surprises. The O.D.D.S.® package emits an alarm and displays a message to give increased time to effectively reduce potential risks. Alerts security if a vehicle is attempting to enter your facility through the exit lane.

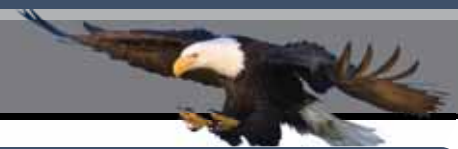

### *Multi-functional*

The system can be utilized with any USR security product or has the capability to be used in conjunction with any barrier product or security system to improve ACP functionality and safety.

### TYPICAL INSTALLATION

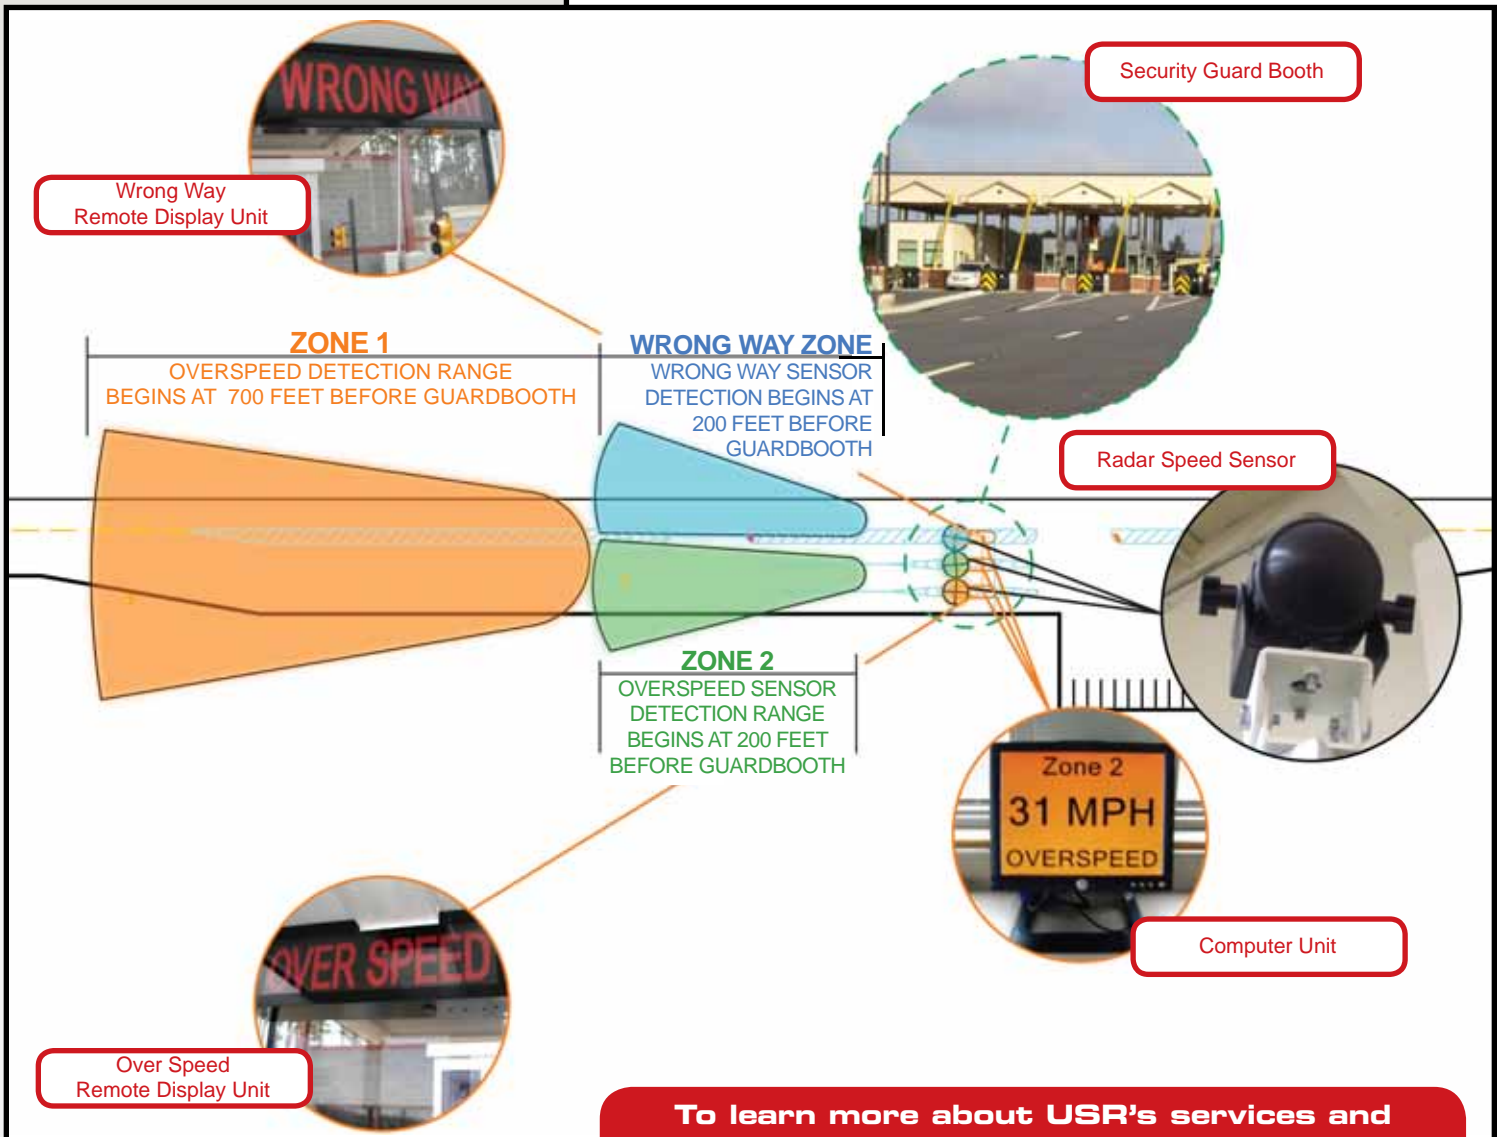

# ODDS®

(Over-Speed Directional & Detection System)

### Applications

The O.D.D.S.® package is designed to alert guards to potential threats by detecting vehicles traveling at a high rate of speed and by alerting to vehicles entering or exiting in the wrong direction. These benefits have made O.D.D.S.® an ideal security solution for many applications such as:

- Military Facilities
- Government Buildings
- National Laboratories
- And many more...
- Corporate Entrances/Exits
- Airports
- Borders and Checkpoints
